

14TH GREEN

Standard Soil Analysis (Mehlich III Extraction)

Performed by The NINEMIRE GROUP

Client:

North Ryde Golf Club

Field Representative:

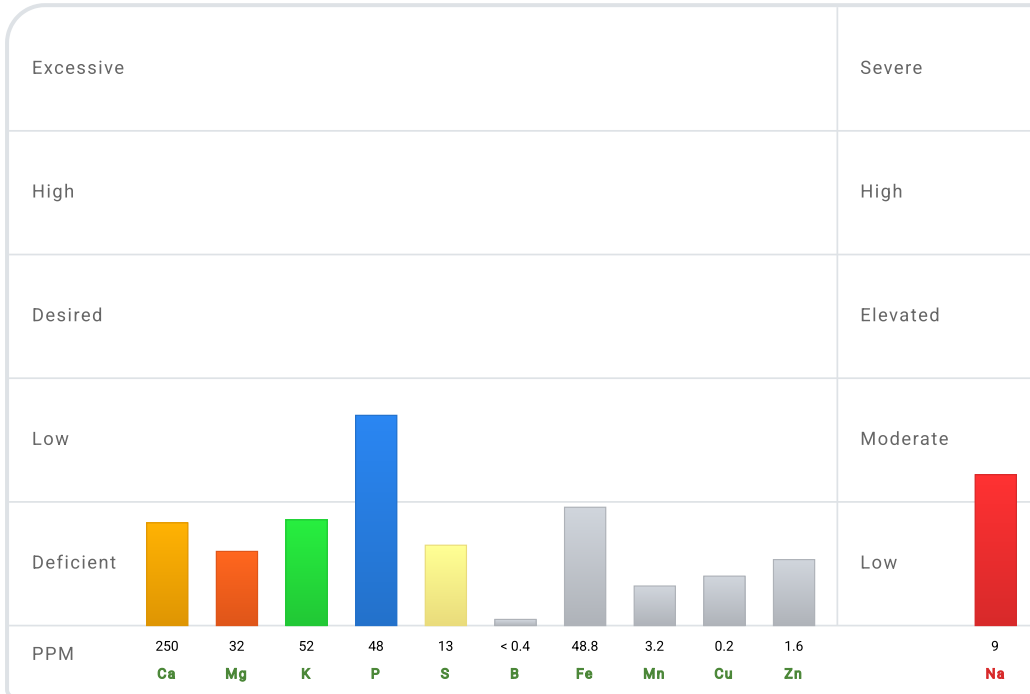

Jack Micans

Date of Analysis:

16/3/2026

Soil Nutrient Status

1.8

Total Exchange Capacity

< 0.5%

Organic Matter (humus)

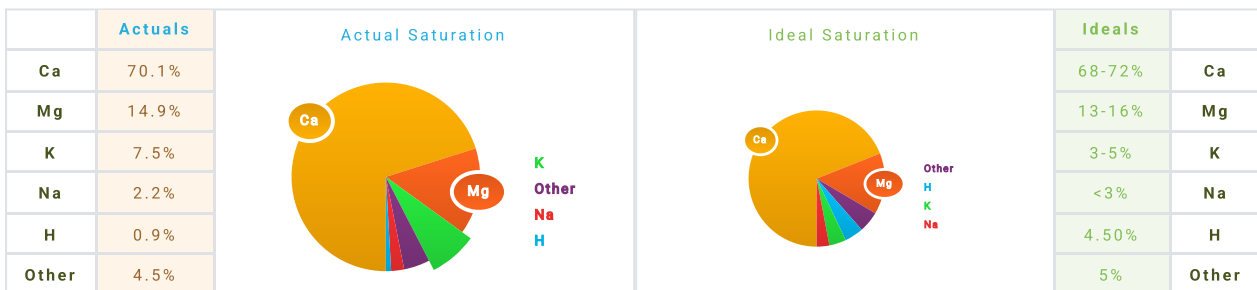

6.9

pH (H₂O 1:5)

0.06

Conductivity (mmhos/cm)

Base Saturation: Key Elements

Kg per Ha of Calcium deficient	1269
Kg per Ha of Magnesium deficient	146
Kg per Ha of Potassium deficient	191
Kg per Ha of Phosphorus deficient	18

Apply a total of 55.17 Kg per 100m² of Tru-Gyp over an appropriate number of applications

Apply a total of 9.13 Kg per 100m² of Soilfix Mg over an appropriate number of applications

Apply a total of 11.94 Kg per 100m² of Activate K over an appropriate number of applications

Apply a total of 2.00 Kg per 100m² of Best Greens King Starter 10-9-17 over an appropriate number of applications

These numbers are to correct soil deficiencies only. Nutrient losses such as leaching or plant uptake should be considered when formulating maintenance programs. TX Trace may be required to increase levels of iron, manganese, or both.

2ND GREEN

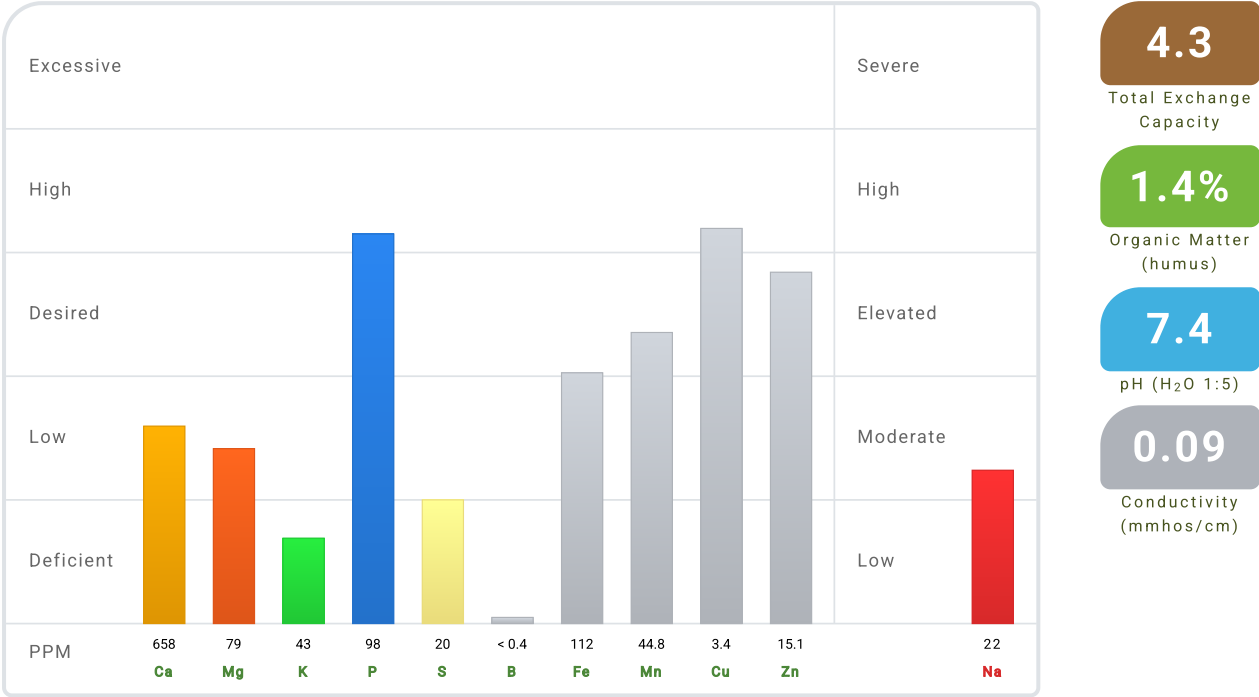

Standard Soil Analysis (Mehlich III Extraction)

Performed by The NINEMIRE GROUP

Client:
North Ryde Golf Club
Field Representative:
Jack Micans
Date of Analysis:
16/3/2026

Soil Nutrient Status

Base Saturation: Key Elements

Kg per Ha of Calcium deficient	660
Kg per Ha of Magnesium deficient	76
Kg per Ha of Potassium deficient	205

Kg per Ha of Phosphorus deficient 0

These numbers are to correct soil deficiencies only. Nutrient losses such as leaching or plant uptake should be considered when formulating maintenance programs.

Apply a total of 28.70 Kg per 100m² of Tru-Gyp over an appropriate number of applications

Apply a total of 4.75 Kg per 100m² of Soilfix Mg over an appropriate number of applications

Apply a total of 12.81 Kg per 100m² of Activate K over an appropriate number of applications
